

Rainwater collection system maintenance / service options

Water Testing and Analysis:

We can provide water testing and analysis ranging from simple water quality parameters to bacterial presence to full chemical composition, depending on your exact needs.

Price: Starting at \$95*

***Price includes bacterial presence/absence test – charges for additional tests will apply**

Filter and UV Bulb Replacement Service:

Changing the filters and UV bulb in your rainwater harvesting system is the most important action to ensure the best water quality. IWS makes scheduling these changes easy with our Replacement Service. After subscribing, we will determine your filter needs and ship you replacement filters and/or UV replacement bulbs at regularly scheduled intervals in the mail. Let us remember your filter changes for you!

Price: Starting at \$250/year*

***Service includes (2 sets) 4"x10" cartridge filters & (1) TrojanUV bulb**

***Other types of filters & UV bulbs will change the cost of this service**

***See Annual Maintenance Contract plan for additional services**

Winterization Service:

This service is intended for rainwater collection systems used solely for irrigation purposes or for systems used for potable water in homes where the homeowners are not present during the winter.

Service includes 2 visits:

Before freezing weather sets in, we will decommission your rainwater collection system. Once freezing weather forecasts have ceased, we will come back out to start up your system. Decommissioning implies leaving pump systems depressurized throughout the winter months.

If you use this service, any damage to your system due to freezing weather, will be repaired by IWS at no charge to you.

Price: \$95*

***Price for systems within City of Austin ETJ – additional mileage charges may apply**

Annual Maintenance Contract - Rainwater Systems used for Irrigation:

This option provides peace of mind, knowing that your rainwater collection system is performing efficiently for your irrigation needs. This service does not provide a warranty on the system, per se, but it is intended to keep the system in working order and help diagnose potential problems before they occur, saving you money.

Annual maintenance:

- Visual inspection of roof, gutters, and collection pipes
- Drain the collection pipes
- Clean out debris inlet filters and first-flush filter
- Check entire system for potential leaks
- Test pump system (if installed) to check for potential issues
- Provide maintenance report after each visit

From this maintenance visit, if services are required to correct a potential problem, IWS will provide an estimate for performing this work. If IWS did not install the system, an initial survey of the system will be performed and any work to correct existing issues with the system will incur a one-time charge to bring the system up to IWS standards.

Price: \$125*

***Price for systems within City of Austin ETJ – additional mileage charges may apply**

Annual Maintenance Contract - Rainwater Systems used for Potable Systems:

This option provides peace of mind, knowing that your rainwater collection system is providing you with the cleanest and best tasting water for your potable needs. This service does not provide a warranty on the system, per se, but it is intended to keep the system in working order and help diagnose potential problems before they occur, saving you money.

Bi-annual maintenance:

- Visual inspection of roof, gutters, and collection pipes
- Drain the collection pipes
- Clean out debris filters and first-flush filter
- Clean off any debris from the floating filter inside cistern
- Inspect UV system controller
- Check entire system for potential leaks
- Provide maintenance report after each visit
- Install new cartridge filters (includes 2 sets of filters)

Annual maintenance:

- Replacement of UV bulb (includes 1 UV bulb)

Price: Starting at \$495*

***Additional mileage charges may apply depending on system location**
